

ISO 13485 certification

B2B Link China A/S is proud to announce that we have obtained an ISO 13485 Medical approval from TÜV Rheinland. It certifies that we have established and apply a quality management system for medical devices for the following scope:

“Manufacture, distribution and assembly of rehab and support parts for children, disabled and elder people”

An increasing number of B2B’s customers in Europe and North America can be found within rehabilitation, elder care and baby care, so it has been a major focus to develop our quality management system to meet the requirements in these industries.
